

## Year 1 C Newsletter Article

This term in year 1, we have been learning how to collect and record data and information. We have used our eyes to observe and used our voice to ask questions to collect information about our class. Students recorded the information they collected into tables, using tally marks and numbers, and a picture graph to represent the data. They also learned about questions and how we use questions to help us learn about our world. During this activity students had the opportunity gather information from another class. Students in 1C asked students from the other year 1 Class- *Which animal is your favourite?* During this activity the children collected, recorded and analysed data independently. They then presented their data as a picture graph. All students have been trying their best and making great progress with these maths concepts.
